Fineflex

by Fine Decor & Schattdecor

Fineflex meets all the requirements for a modern and environmentally friendly decorative surface. And, it's made in Germany! With the merger of Fine Decor and Schattdecor, years of design expertise in solid colors and decor printing have come together along with pioneering technology for the production of sustainable lacquer laminate surfaces. The two companies are united in their first joint product – Fineflex.

Through a patented lacquering process we achieve a surface with a unique feel and anti-fingerprint effect. It is particularly easy to clean and resistant to external influences. Thanks to optimum moisture resistance, Fineflex is ideal for use in kitchens and bathrooms. Due to its outstanding processing properties, Fineflex is the environmentally friendly alternative for 2D lamination, as a thermoforming film for three-dimensional surfaces and wrapping or postforming.

In a unique manufacturing process, we can produce new furniture surfaces using recycled material from PET. With our stock collection of 14 solid colors, customers can choose from super matte to high gloss, according to current trend and project requirements.

Being mindful of current trends and environmentally aware, we are working to expand our joint product portfolio. In addition to PET-based solid colors, we would also like to offer you this innovative substrate with decor printing.

Together we can shape the future

Fineflex reflects the next generation of furniture surfaces

Our USPs

- **Recycled**

Fineflex is made from a high percentage of recycled PET. Depending on the intended purpose, customer specification and color group, the recycled content of Fineflex can be as high as 80 percent. We also use a unique process to recycle the manufacturing scrap from our own production cycle into new raw material thus bringing it full circle back into the production process.

- **Anti-fingerprint**

Our Fineflex surfaces with super matte finish have a remarkable anti-fingerprint effect - thus making it exceptional and distinguished with excellent performance properties.

- **Wide range of applications**

Fineflex films are particularly elastic and flexible making them ideal for a wide range of applications including 2D lamination, as thermoforming films for three-dimensional surfaces and wrapping or postforming. They offer an environmentally friendly, modern alternative.

Produktinformation

- **Quality – made in Germany**

With Fineflex, we offer you an exceptionally high quality product "Made in Germany". The multi-layered structure of the film ensures strong opacity and allows us to achieve particularly low color tolerances.

- **Durable**

Fineflex surfaces are particularly resistant to abrasion. They withstand high wear and tear and thus promise a long product life.

- **Resistant to external influences**

Due to their resistance to moisture, Fineflex films are ideal for use in the kitchen or bathroom. They are non-fading and, depending on the version, they can withstand heat and chemical substances.
