

MELAMINE FILM FOR DEEP STRUCTURES OUTSTANDING PRESSING RESULTS IN TERMS OF LOOK AND FEEL

Deep structures and special matt-gloss effects are in demand like never before. They ensure a special feel, look and lively decor structure.

The challenges increase with the depth of the structures. During the pressing process, errors can occur in the decor image.

Our special formulation in combination with our Decolay Classic ensures special matt-gloss effects and an optimal separating effect between the melamine film and the press plate. In this way, we can be ideally integrated into your production process and can serve both the demand for particularly deep decor structures and the demand for the highest quality in terms of look and feel.

The result: Maximum deep structures with a special pore realism, even with synchronous pressing, complicated special plates, challenging structures and in the processing of decorative and plain surfaces in the matt-gloss area.

Do you have a sophisticated textured plate? We offer the solution!

As the international market leader in the field of impregnation, we see ourselves as a solution provider and are available to you worldwide with our uniform Schattdecor standard and service. It is our aim to develop solutions that make you successful.
