

## IMPREGNATED SURFACES WITH EXTRA HYGIENE PROTECTION

Our customers are particularly important to us. Therefore, we are doing our best to provide products that meet the highest standards. Together with specially selected additive suppliers, we are able to offer our **Impregnated Surfaces** (Decolay Classic, Decolay Real and Teclay Overlay) also in an **antibacterial and/or antimicrobial version**, thus providing your products with additional hygiene protection.

We are pleased to make a preselection of suitable additive suppliers from our network for you.

### What advantages do antibacterial/antimicrobial surfaces have?

Antibacterial and/or antimicrobial surfaces inhibit the formation and growth of bacteria and harmful microorganisms. They reduce the formation of odors, and provide additional hygiene protection. This hygiene effect is particularly suitable for frequently touched surfaces, both in private areas, such as kitchens and bathrooms, and in public areas, such as shops or restaurants.

#### Facts:

- ✓ Hygiene protection as an added value on top
- ✓ Lasting effect over the entire product life
- ✓ All other characteristics and quality of our products remain unchanged
- ✓ Joint realization by Schattdecor and the specially selected partner
